Industry certification preparation.

Training Programs | 1 of 2

Entrepreneurship

In this course, students will delve into the fundamentals of entrepreneurship, including idea generation, business planning, marketing strategies, financial management, and the essential skills needed to run a successful venture.

Irrigation

Our irrigation class focuses on sustainable water management practices, precision irrigation systems, water conservation, and the latest technologies in the field. Hunter irrigation

Supply Chain Management

This course is designed to provide students with a comprehensive understanding of supply chain principles, logistics, inventory management, and distribution strategies.

Certified Production Technician (CPT)

As part of our commitment to preparing individuals for success in the manufacturing industry, we offer a Certified Production Technician program. This course covers core competencies such as safety, quality control, manufacturing processes, and maintenance procedures.

Certified Forklift Associate (CFA)

Online training courses are aligned with MSSC standards and are designed to build core knowledge and skills in forklift maintenance, service, and repair - from entry-level technicians to front-line supervisors. The courses provide the information and competencies needed to successfully complete the Certified Forklift Associate (CFA) online assessment. This online course is based on the 20 key activities outlined in the CFT standards and establishes a strong theoretical foundation for progression into the hands-on CFT training component.

OSHA 10 (Occupational Safety and Health Administration)

OSHA is a U.S. government agency that aims to ensure safe and healthy working conditions for employees. It sets and enforces workplace safety regulations, conducts inspections, and provides training and resources to employers and workers. Learning about OSHA includes understanding workplace hazards, safety protocols, personal protective equipment (PPE), emergency response, and more.

Underground Utilities

Underground utilities refer to the infrastructure of pipes, cables, and other systems that are buried beneath the ground. These utilities include water pipes, sewage systems, gas lines, electrical cables, and telecommunication networks. Understanding underground utilities is essential for construction workers, excavators, and anyone involved in digging or trenching to avoid damaging these crucial systems and prevent accidents.

Red Cross CPR

CPR is an emergency life-saving procedure used when someone's heart stops beating or they stop breathing. It involves chest compressions and rescue breaths to maintain blood circulation and oxygen supply until professional medical help arrives.

Small Appliance

Gain the skills needed for a career in small appliance repair with our training program, which includes hands-on instruction and preparation for EPA608 Core and Type 1 certifications. Enhance your workplace safety knowledge with an OSHA 10 - General Industry course, earning a recognized certification. This comprehensive training equips you with technical expertise and safety awareness, making you a valuable asset in the appliance repair industry.

Foundations for Growth

Building Skills for Personal and Professional Success is a 25-lesson program covering soft skills, emotional intelligence, accountability, critical thinking, problem solving, communication, teamwork, time and resource management, information evaluation, systems thinking, and responsible technology use. Group activities and reflection exercises help students apply these skills to daily life and workplace readiness.
